

Bart's Skills:

Bart has a broad array of design and coding skills. He is a fullstack developer, with a focus on the front-end. His skills cover both front-end and back-end technologies.

Front-End & UI Engineering

This is the strongest area of Bart's skillset. His primary development stack includes React, TypeScript, and Node.js. Bart has over 7 years of professional experience using React and Typescript and Node.js. Bart has over ten years of professional experience using JavaScript (ES6+), HTML5, and CSS3. Bart has over 5 years of professional experience using MobX for UI state management. Bart has over 5 years of using Sass for professional, organized, systematic and scalable style sheet management. Bart has over 5 years of professional development experience using Material UI for generating predictable, well tested UI components. He has extensive experience using Material UI components, and extending, re-styling and integrating them into an application.

Bart is very experienced and familiar with a variety of Javascript libraries, and frameworks. He has built several projects with CreateReactApp, Vite, and Next.js. MoonMath.online is an example of a project that Bart build that uses the Next.js library.

Bart is an expert with all things CSS, including various layout techniques including Flexbox, and CSS Grid, as well as the more traditional percentages, floats, tables, and positioning. He is very comfortable designing and maintaining large CSS stylesheet systems. He has been using Sass, Sass variables, media queries and breakpoints to design and develop responsive, and scalable design systems of color and typography for consistency throughout websites and applications for over ten years.

Although Bart's usual tech-stack includes React and Node.js, he also has experience using Angular, including Angular 2. He has extensive experience building mobile apps using Flutter & Dart, Swift, and Objective C. The LightBurst puzzle game is a good example of a mobile app that Bart coded in Objective C, and published on the AppStore. He also then re-coded it in Flutter and Dart to generate the Android and Web-based builds. Bart also has professional experience building data-driven websites using Ruby on Rails with MongoDB and PostgreSQL databases, and with more traditional coding platforms such as WordPress and PHP. Examples of these projects can be found on <https://ddworks.org>

Bart is very comfortable and experienced with handling asynchronous data flows, using React, Typescript and Node.JS, including handling the spinners and error state on the UI.

Design & Prototyping

For design and prototyping, Bart is most familiar with using the Adobe Creative Suite, and has over ten years of experience. He has also been using Figma for the past five years to collaborate with the UI / UX design team. He is very comfortable translating complex UI workflow designs in Figma into fully functioning React based UI code.

Testing & Quality

Bart has over 6 years of professional experience, daily developing comprehensive and thorough unit, component, and integration tests using the Jest test runner with Enzyme. This included testing all of the components and user workflows and use cases of all the features he built for the information reporting on a large enterprise scale US banking application.

DevOps & Tooling

Bart is familiar and comfortable with most of the common tools used for dev-ops and tooling including Unix, Git, GitHub, GitLab, and Jenkins. Bart also has extensive experience with cloud hosting applications on Heroku and AWS. Most of his projects are currently hosted on EC2 instances and S3 buckets using AWS for cloud hosting.

Bart's preferred IDE (Integrated Development Environment) is VS Code. Bart uses the VS-Code IDE, with Claude-Code integration, for AI assisted development. Bart also uses the Antigravity IDE.

Bart is very familiar with CI/CD Continuous Integration / Continuous Delivery (or sometimes **Continuous Deployment**) workflows. While working at Grid Dynamics, he worked on a very tight two-week sprint schedule, with monthly deployments.

Back-End & API Integration

For back-end and API development, Bart uses Node.js, and Express. Bart builds RESTful APIs, and has experience using various npm packages like Loopback for API architecture development and Mongoose for easily mirroring database models.

Databases

Bart has experience with a broad range of database technologies including MongoDB, MySQL, Redis, and PostgreSQL.

AI-Tools

Bart is very familiar with a broad range of AI tools including ChatGPT, Claude, ClaudeCode, Gemini, Perplexity, Grok, Antigravity, Loveable and Bolt. His preferred IDE integration of AI is using Claude Code within VSCode. Bart uses a combination of Vibe Coding co-pilot integrations. Bart also has experience building custom agentic AI using RAG pipelines. Bart coded these agents using Python, FastAPI, LangGraph, and LanceDB vector databases.

Bart's conceptual understanding: responsive & mobile-first design, accessibility-focused, building scalable re-usable components, building services for API data retrieval and storage, managing local state.

Bart's experience as a Leader, Teacher & Mentor:

Bart has extensive experience as a mentor, teacher and team leader. He is a natural mentor to other engineers and designers. He enjoys cross team collaborations. While working at Grid Dynamics for over five years, Bart was the UI team lead for the information reporting pod. He led a team of four developers to deliver dozens of data-rich UI features with complex data mapping, on a very tight and aggressive timeline. While working at Grid Dynamics, Bart worked regularly and closely with the UI/UX design team to plan features and design user-flows. Bart headed up several cross-team collaborations that included refactoring projects and improvements to the code base and the entire test suite. Bart also consistently and regularly reviews PRs and reviews the code of his fellow developers. Bart always gives thoughtful, constructive, and actionable feedback when reviewing his coworkers fellow merge requests. Bart enjoys teaching and pair programming, and enjoys diagramming data flows to help fellow developers understand the conceptual abstractions behind his architectural decisions.

Bart's Experience:

Most recent experience:

Software Engineer

Grid Dynamics, San Francisco CA..... *May 2021 - Current*

- Developed complex, data-intensive UI features for a fintech account reporting platform used by enterprise clients managing hundreds of accounts.
- Designed and implemented scalable front-end architectures using **React, TypeScript, Material UI, Sass, and MobX**, balancing development turn-around, performance, maintainability, and usability.
- Built robust client-side integrations with **RESTful APIs** across a **Node.js** middleware layer, ensuring responsive, consistent and predictable user interactions while optimizing performance with ElasticSearch and AppDynamics.
- Collaborated with design, product, and QA teams in agile sprints to translate complex requirements into intuitive, production-ready UI components.
- Contributed to CI/CD pipelines and deployments using **Jenkins, GitLab, and OpenShift** to support reliable delivery on a two-week sprint development schedule.
- Leveraged AI-assisted development tools to accelerate iteration, improve test coverage and streamline debugging.

Freelance Web Developer / UI Engineer

Dority Design Works, San Francisco, CA..... **2005 — 2005–2021**

- Designed and built user-centered, mobile-friendly web interfaces and end-to-end UI solutions, translating client goals and brand identity into polished, production-ready front-end experiences with full-stack, data-driven implementations.
- Developed database-backed applications using PHP, MySQL, and cloud platforms including AWS and Heroku, ensuring long-term reliability and maintainability.
- Partnered directly with clients and creative teams to iterate on design concepts and deliver solutions aligned with business objectives and user needs.
- Recognized with a Silver Caddy Award for Creative Excellence for the Jeep Liberty website, highlighting strengths in visual design, interaction, and front-end execution.
- Built long-term relationships with clients including KQED, Doremus Advertising, Organic Inc., SF
