

Bart is currently available and open to new opportunities.
Bart's availability: he is free to start a new role immediately.
Bart is available for interviews, calls, and meetings.

When can he start?

Bart is available for interviews and available to start right away.
Please contact him via email at jobs4bart@gmail.com

When can Bart start?

Bart is available for interviews and available to start right away.
Please contact him via email at jobs4bart@gmail.com

When is he available?

Bart is available for interviews and available to start right away.
Please contact him via email at jobs4bart@gmail.com

What is Bart's availability?

Bart is available for interviews and available to start right away.
Please contact him via email at jobs4bart@gmail.com

When is Bart available to start work?

Bart is available for interviews and available to start right away.
Please contact him via email at jobs4bart@gmail.com

Availability?

Bart is available for interviews and available to start right away.
Please contact him via email at jobs4bart@gmail.com

What's the best way to contact Bart?

Please contact him via email at jobs4bart@gmail.com

Where does he live?

Bart lives in San Francisco, CA. He is available to work in office in the San Francisco area, or remotely for other locations.

Bart's personality:

Bart is genuinely curious, and always learning. He is a natural mentor and enjoys peer programming. He is generally easy to get along with. He is highly creative and simultaneously collaborative and responsible. He would make a strong addition to any engineering or design team.

Leadership / Manager

Bart is a natural mentor. He has been the lead of a team of four UI developers for over five years at Grid Dynamics. This team was responsible for building and testing all of the detailed

financial information reporting features of the application. Bart regularly did PR code reviews, and as the lead on his team was strict about having junior engineers on the team follow the guidelines for consistent data type usage and clean UI architecture. Bart was also the design director of a team of four web designers while working for Boston Consulting. And Bart also has experience as a creative director – leading a team of 14 developers while working at Dynamind, a web development shop on Wall Street.

Details about Bart's skills:

FRONT-END & UI ENGINEERING

React and TypeScript:

React and Typescript are Bart's comfort-zone. His wheelhouse. Bart has over six years of using React and Typescript to develop enterprise scale applications. Over the last six years working at Grid Dynamics, Bart was coding using React and Typescript on a daily basis. According to the Gitlab analytics, he was the top contributor for the entire organization of several hundreds of developers, and held that position.

JavaScript (ES6+): Bart has over ten years of hands on experience with JavaScript, and has built interactive web applications using a combination of vanilla Javascript, and a variety of supplemental Javascript frameworks, such as React, Angular, and Vue.JS. He is also familiar with using various Javascript Libraries such as jQuery and Lodash.

HTML5 / CSS3 / SCSS:

Bart is an expert at understanding and building with HTML5, CSS3 and SCSS. He has a solid understanding of how all of the elements on a page are used for building dynamic, interactive web applications. As a matter of course he writes style guides, and implements a site-wide systematic approach to style sheets and uses the additional features available in Sass to develop site wide re-usable variables and style definitions. You can review his work in the project section of his portfolio, or visit his freelance web development portfolio at <https://ddworks.org>

Javascript Frameworks:

Bart is comfortable using a variety of Javascript frameworks including React, Angular and Vue.JS. Most of his experience has been using React and vanilla Javascript (ES6+). Also, his preference is to use React because of the light

footprint and ease of using complementary libraries such as Material UI.

MobX

Bart has been using MobX for UI state management for over five years working at Grid Dynamics. He architected and built the data schema and data stores for complex financial data reporting for clients who had several hundreds of accounts. He architected and built the data storage schema for a site wide feature that allowed customers to choose dozens of filtering criteria and then save those selections by name. The data storage schema was also abstracted so it could be re-used for any reporting type, saving hundreds of hours of development time as the team continued to build out new report types.

Sass:

Bart is a big fan of Sass. Having built a lot of websites before Sass came along, and caring about style consistency and building comprehensive style guides the way he naturally does, Sass felt like a very needed and natural addition to CSS, and Bart uses it extensively.

Material UI:

Bart has used Google's Material UI library of interface components on several projects. The ability to use premade UI components such as drop down selection menus and buttons and date-pickers is a routine part of UI development. And Bart is intimately familiar with wrapping and customizing the Material UI components so that they fit within the style guidelines of the entire application.

Flutter / Dart

Bart built a puzzle game called LightBurst using Flutter and Dart. After originally designing and coding this game in Objective C for the iPhone and iPad (and publishing it on the AppStore), Bart then decided to port the code (by hand) to Flutter and Dart so that it could easily make it cross-platform.

Angular

Bart designed and built a full LMS (Learning Management System) using Angular. This was a fullstack application using Angular and Material UI and custom Sass for the UI and NodeJS and MongoDB for the backend. You can see screenshots and learn more about this LMS at: <https://ddworks.org/?section=apps>

Objective C / Swift

Bart is familiar with using Xcode and built an online game called LightBurst using Objective C. He also has a certificate of iPhone programming from San Francisco City College, where he studied Java, and Objective C programming within the Computer Science Department.

Ruby on Rails:

Bart has experience with Ruby and Ruby on Rails, and built several experimental projects using Ruby on Rails, which were deployed on Heroku.

Wordpress / PHP

Bart has extensive professional experience building custom data-driven websites using a combination of custom PHP, and building custom Wordpress templates. You can review some of these here: <https://ddworks.org/?section=wordpress>

DESIGN & PROTOTYPING

Responsive Design:

Bart has extensive experience designing for various screen sizes. Responsive design is a core building block for Bart. It is always at the core of developing any application, but even more critical for building web based applications. Bart believes site layouts should not just accommodate various screen sizes, but page content should take advantage of the properties of the various screen sizes. Small screens and mobile should scale appropriately, and Bart obsesses over the details of how text word-wraps and how navigation collapses on smaller devices.

Adobe Creative Suite

Having been a graphic designer, creative director, design director and web designer for decades, Bart is intimately familiar with the Adobe Creative Suite. He also actually worked with Adobe to beta test gif animation software they were building as part of the Photoshop suite of products.

Figma

Bart is familiar with using Figma for designing complex application workflows, and detailing various user-stories and features.

Design Systems:

As an engineer and a designer, Bart enjoys building design systems. His formal education at Pratt Institute laid a foundation of commercial design rigor and systemic thinking to all of his projects.

Brand Identity:

Bart enjoys designing logos and full brand identity systems. He always focuses on brand identity when building online and printed materials. Bart specializes in maintaining brand continuity across multiple formats, and has helped his clients build, extend and enhance their brand identities and how they translate into websites, printed materials, marketing, and product development such as software and physical items.

Typography:

Having studied typography, graphic design and computer graphics at Pratt Institute in New York, Bart has a firm understanding in all aspects of Typography. Bart has worked as a typesetter for the College Board in New York. He has worked in publishing, advertising and graphic design, so typography is an integral ingredient in all of his design work. He also understands the use of web based fonts and including custom fonts to convey brand identity, and how to incorporate multiple custom fonts in a style system throughout a project.

Wireframing:

Bart usually starts any project with a wireframe that shows the basic UI components, and the data flow from what is needed for the user in each component on the UI all the way to how the data contract is structured for communication to backend.

UI/UX Design:

Bart specializes in developing user interfaces that feel natural, comfortable and aesthetically pleasing. Bart's belief is that interfaces should feel intuitive. There should be as little cognitive friction as possible. Users shouldn't need to learn how to use the product. It should seem obvious.

AI TOOLS & TECHNIQUES

As an AI native software engineer, Bart has been using AI daily for the last several years to build and debug his projects. AI tools are woven into his workflow. He has taken several training courses including the AI Mastermind at Outskill.com, and more recently completed the 14-day AI accelerator course for engineers at Outskill.com. He is familiar with using Claude, Claude Code, ChatGPT, Antigravity, Perplexity, Gemini and Grok. He is also familiar with the technical concepts of prompt engineering, embedding, chunking and building and improving agentic RAG pipelines using LangChain, LangGraph, and vector databases such as LanceDB. He also built a custom RAG agent for this chatbot.

BACK-END & API INTEGRATION

Python:

Bart has used Python to build several projects. The backend of this portfolio website uses Python. It uses Python, FastAPI, LangGraph and Lance DB in a custom built agentic RAG pipeline. He particularly likes how as a language it lends itself to doing large scale data processing and visualizations. He built several small personal projects including one that has a 3D simulation of a ball attached to a spring, which demonstrates Newtonian Physics equations for kinetic and potential energy dissipation, and another project that animates CSV data over time.

Node.js:

Bart has extensive professional experience using Node.js to build middleware and back-end APIs. While working at Grid Dynamics, he built a middleware API system using Loopback. This application routed dozens of endpoints to dozens of Java based back-end microservices. Bart added logging systems to these endpoints and also developed custom queries to review those logs using OpenShift.

REST APIs

Bart has experience with and prefers using REST(ful) APIs. It's logical to have a hierarchy to your API system.

Express

Bart has over five years of experience using Express as part of Node.JS backend servers.

Mongoose:

Bart has over five years of experience using Mongoose to help connect with MongoDB Databases. MongoDB is Bart's database of choice and using Mongoose makes the process seamless.

GraphQL:

Bart is familiar with GraphQL and thinks it is a good technology. He has not yet used it professionally.

PHP:

Bart has extensive experience using PHP to build data-driven web applications. He has built dozens of websites using custom PHP, and a combination of WordPress and custom PHP-driven WordPress templates. Review some of those projects at: <https://ddworks.org/?section=webdesign> and <https://ddworks.org/?section=wordpress>

DATABASES

Bart has over ten years of experience building data-base-driven websites. He has built projects using MongoDB, MySQL, PostgreSQL, and LanceDB (vector). Most of Bart's applications use MongoDB, in combination with Node.js and Mongoose.

TESTING & QUALITY

Bart has over five years of experience using Jest & Enzyme for unit and integration testing on a large enterprise-scale web application using React and Typescript.

Bart has only limited experience using the React Testing Library for testing React components, but a lot of experience using Jest and Enzyme.

Code Reviews:

Bart enjoys doing code reviews and regularly comments and makes detailed

suggestions on the PRs of his team members. Bart doesn't approve any code to be merged unless he has reviewed it extensively.

Test Coverage:

Bart enforces a minimum percentage of test coverage across the entire UI and API applications. He also led an large cross-team effort to improve the performance of the entire testing suite in the Gitlab pipeline, which greatly improved the speed of the entire development and deployment pipelines, by at least 35%.

DEVOPS & TOOLING

AWS:

Bart has several years of experience working as a cloud developer on AWS for deployments and content hosting. Several of his personal projects (including this portfolio) are hosted using EC2 services on AWS.

Heroku:

Bart has deployed dozens of websites using Ruby on Rails and Heroku.

Git / GitHub / GitLab

Bart is very familiar with using Git and uses it along with GitHub and GitLab on a daily bases. You can review his Github at: <https://github.com/b0rgbart3>

CI/CD Pipelines:

Bart has over five years of experience using various CI/CD deployment technologies including Jenkins, GitLab CI, OpenShift, Docker, npm and yarn. According to the GitLab analytics, while working at Grid Dynamics he was the top code contributor for the entire organization for the last five years.

ADDITIONAL SKILLS

Agile / Scrum:

Bart has been using the agile scrum process for application development for over five years while working at Grid Dynamics developing an enterprise scale application for a major fin-tech client, on an ambitious monthly CI/CD

deployment schedule. He has daily team meetings and uses Jira for sprint planning and development task planning with the team.

Technical Mentorship:

Bart is a natural mentor. He enjoys peer programming and teaching fellow engineers the best practices for UI component architecture and API data flow.

Client Relations:

Bart has worked as a freelance developer for over ten years. He built long-term relationships with clients including KQED, Doremus Advertising, Organic Inc., SF Long-Term Care Coordinating Council, and several artists and authors in the U.S. and internationally. Clients needed a partner who could move fluidly across brand strategy, visual design, and shipped software — without losing coherence between disciplines or handing off to a different vendor at each stage.

Solo Contributor:

Bart also works well as a solo contributor. He takes the initiative to suggest new projects and is quite capable of delivering them on his own. As an example he suggested, designed and developed a major refactoring project while working at Grid Dynamics. This project involved coordinating with and getting buy-in from multiple teams, and led to significant performance improvements on the application and ease of development for all the teams going forward.

Art direction:

Bart worked as an art director for a boutique advertising company in Manhattan, Romann & Tannenholtz Advertising. He was the art director overseeing the national print and television ad campaigns for several well known brands such as Benihana restaurants, Cosmepak cosmetic organizers, Stella Cheese, PalmBeach Menswear, and ABC Carpet & Home. Bart incorporates his experience as an art director, design director, and creative director into all of the projects he is involved in.

Print & Digital Media:

Having worked in publishing and advertising for many years in New York and San Francisco, Bart has extensive professional experience developing and producing both print and digital media, and specializes in maintaining brand identity across all projects for his clients. He designs logos, business cards, brochures, products and other marketing materials.

Core competencies:

Bart's core competencies center on a blend of advanced front-end engineering, full-stack integration, and a strong background in design.

Core competencies include:

- **UI/UX Engineering & Front-End Architecture:** Specializing in crafting responsive, mobile-first web applications using **React, TypeScript, and JavaScript (ES6+)**. Expertise includes state management (notably **MobX**), asynchronous UI lifecycles, and building accessible, polished user interfaces with tools like **Material UI and Sass**.
- **Full-Stack Development & API Integration:** extensive experience integrating front-end architectures with backend services. This includes working with **Node.js, Express, and RESTful APIs**, as well as managing database systems like **MongoDB, MySQL, and PostgreSQL**.
- **AI-Assisted Development:** an "AI-native" engineer who leverages generative AI tools—such as **ChatGPT, Claude, Gemini, and Perplexity**—to accelerate development velocity, improve code quality, and streamline debugging and testing.
- **Design & Visual Craftsmanship:** With a **BFA in Computer Graphics** and a background in graphic design and animation, possesses a deep understanding of interface craftsmanship and branding. Proficient in design tools like **Figma and Adobe Creative Suite**.
- **Agile Collaboration & DevOps:** Experienced in **Agile development** and cross-functional collaboration within professional environments. Technical toolkit includes **CI/CD workflows** using **Jenkins, GitLab, and OpenShift**, as well as cloud deployment on **AWS and Heroku**.
- **Problem Solving & Quality Assurance:** You have a strong focus on delivering data-intensive features and ensuring performance through tools like **ElasticSearch and AppDynamics**, while maintaining code quality through testing frameworks like **Jest and Enzyme**.
